

Onboarding Powerhouse

Sale Agent Code & Reporting Hierarchy

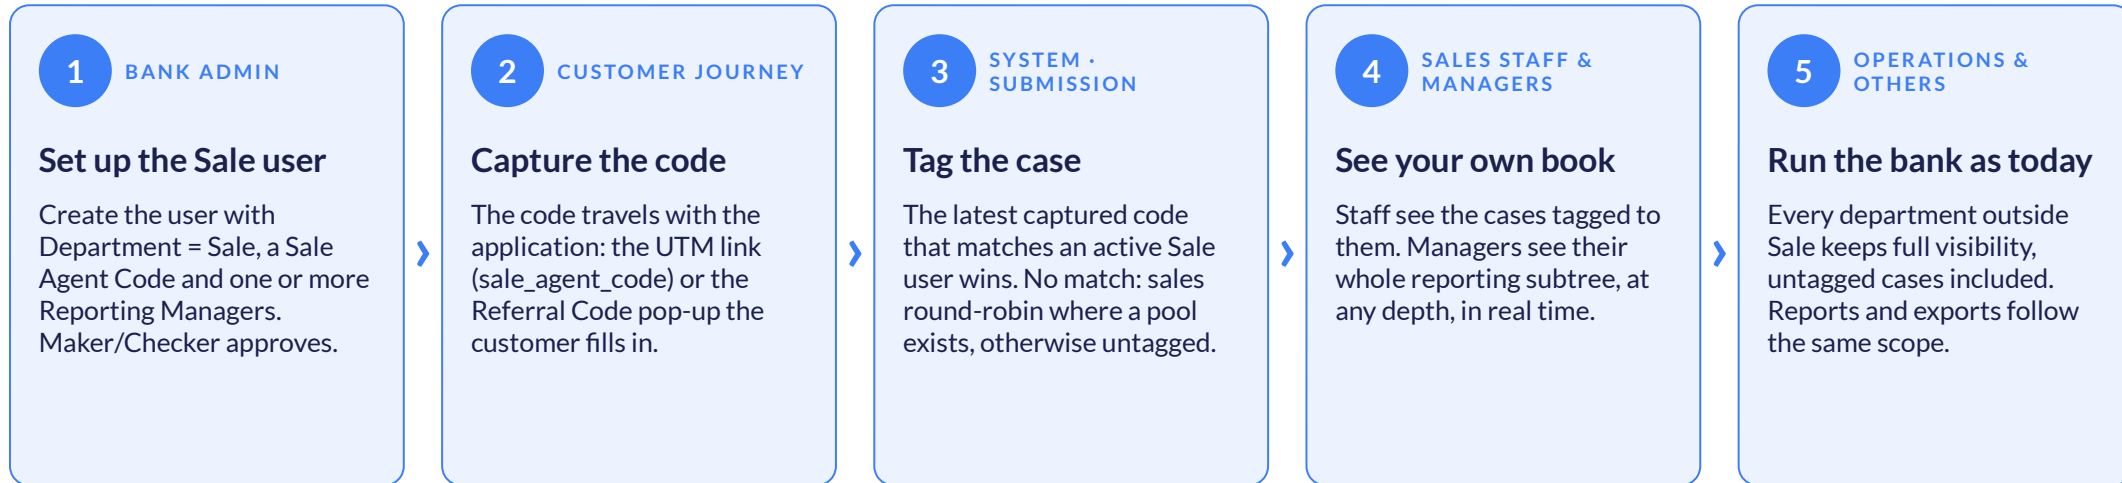

Sales visibility and case attribution for the Bank Portal

Product demo · SMBP V3 Bank Portal · Story AMP-2548 (approved 06/09/2026)

1 • Business Workflow

From user setup to reporting, in five steps

Business Workflow • from setup to reporting

The rule behind it: Department = Sale switches everything on. Sale users get a Sale Agent Code and Reporting Manager; every other department keeps full visibility through the permissions it already has. No new permission, no migration grant.

Maker/Checker on every change

Sale Agent Code and Reporting Manager follow the standard flow; uniqueness and cycle checks re-run at Checker approval.

Tag set once, audited

Attribution is fixed at submission and never reassigned. Raw value, resolved code and source are stored with each application.

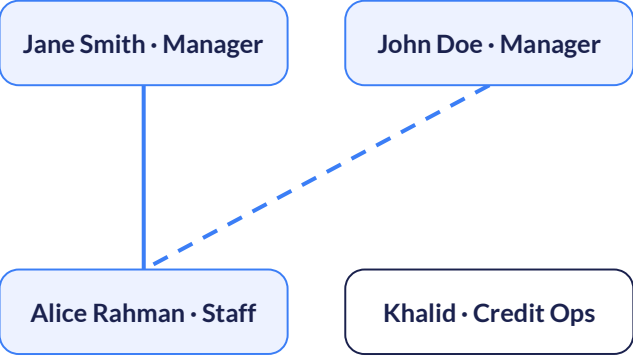

Same scope everywhere

Application Enquiry, Report Enquiry and exports apply the same pre-filter before every other filter.

Who Sees What • visibility by role

Role	Department	Application Enquiry & Report Enquiry	What changes for them
Sales staff	Sale	Own tagged applications only	Own book of business; IM005 "No results found" until the first tagged case
Sales manager	Sale	Own cases plus every user in the reporting subtree, unlimited depth	Several managers per user are allowed; each manager sees the user's cases; updates in real time
Operations, Credit, Admin, others	Any other	All applications, including untagged ones	Nothing: the existing View permission applies, no new permission, no migration grant

Reporting hierarchy, unlimited depth

Alice reports to Jane (solid) and to John (dashed): both see her cases. Khalid is in Credit Operations, has no code and sees everything.

Visibility scope (Department, Sale Agent Code, reporting subtree) is evaluated server-side from the user record on every request. A manager change or a department change takes effect on the next request, never on the next login.

Sale staff and managers

Pre-filter applied before channel, product, status and search filters, on every enquiry screen.

Everyone else

Unfiltered, exactly as today. Untagged cases are visible here and only here.

How a Case Gets Tagged • three capture points, one rule

1 UTM link

The bank shares its link with sale_agent_code=STF-042. The Distribution Portal captures it and passes it to the Bank Portal.

2 Referral Code pop-up

The customer types the code the salesperson gave them. Validated live against active Sale codes; an unknown code can be skipped.

3 Sales round-robin

No matching code? The Sale user with the lowest count, A to Z tiebreak, per channel and product, where a pool is configured.

Precedence: the latest captured value that matches an active Sale Agent Code wins (canonical key, case- and separator-insensitive). Still no match: the case stays untagged, visible to non-Sale users, and ops receive an alert (ET51 pattern).

Immutable after submission

No reassignment function. The tag survives deactivation and department changes, so history always resolves.

Every capture audited

Raw value, resolved code, source (UTM / Pop-up / Round-robin / Backfill) and timestamp are stored with the application.

Optional by design

Both codes are optional, so not every application carries a code. Untagged cases are normal, not errors.

Go-live: historical applications whose stored referral code matches an active Sale Agent Code are tagged once (source = Backfill, audited). Nothing else is touched.

First Name

Alice

Last Name

Rahman

Email ID

alice.rahman@bank.com

Department

Sale -- switches on the two fields below

Sale Agent Code

NEW

STF-042 read-only once approved via Maker/Checker

Reporting Manager

NEW

Jane Smith X John Doe X type to search active Sale users - one or more

Sales Code / Agent Code / Employee ID - free text 1-24 - unique in the bank (IEM001)

IEM002 -- a circular reporting chain is blocked at any depth

Role

Sales Officer

Status

Active

Cancel

Save Changes -- Maker request

Sale Agent Code and Reporting Manager appear only when Department = Sale. Uniqueness, format (IEM005) and cycle checks run at save and again at Checker approval.

List of Users – new columns

User Details – read-only

Search: name - email - Sale Agent Code - RM

Filter ▼

Export

User Name	Email	Department	Sale Agent Code %	Reporting Manager %	Status
Fatima	fatima@bank.com	Sale	STF-001	—	Active
Jane Smith	jane.smith@bank.com	Sale	STF-010	Fatima	Active
Alice Rahman	alice.rahman@bank.com	Sale	STF-042	Jane Smith, John Doe	Active
Khalid	khalid@bank.com	Credit Operations	—	—	Active

Both columns sortable, in the filter panel, in search scope and in the export. Non-Sale users show "—" and keep full visibility through their existing enquiry permissions.

User Details

Full Name

Alice Rahman

Department

Sale

Sale Agent Code

STF-042 ("—" when not assigned)

Reporting Manager

Jane Smith, John Doe ("None" when empty)

Read-only. Both fields are shown only for Sale users.

Both fields appear only for Department = Sale. Sale Agent Code is free text, 1-24 characters, unique in the bank; Reporting Manager takes one or more active Sale users. Non-Sale users show "—" and keep full visibility.

1 Shown only when Department = Sale

Any other department never sees the two fields and keeps full visibility.

2 Sale Agent Code

The bank's own Sales Code / Agent Code / Employee ID. Free text, unique, read-only once approved (IEM001).

3 Reporting Manager, one or more

Multi-select of active Sale users; a circular chain is blocked at any depth (IEM002).

4 Two new columns

Sale Agent Code and Reporting Manager after Department: sortable, filterable, searchable, exported.

5 Read-only details, full control

View Details shows the code and the manager list; "None" when empty. Every change is Maker/Checker.

Customized Table

Application ID	Customer Name	Application Type	Relationship Type	Status	CIF	Previous Application Code	Channel	Sale Staff
RAK_APPRO_202600000202	Customer B	Single	ETB	In Progress	-	-	RAKBANK	Jane Smith
RAK_APPRO_202600000203	Customer C	Single	NTB	Awaiting Customer Selection	-	-	RAKBANK	Alice Rahman
RAK_APPRO_202600000204	Customer D	Joint(1)	ETB	Completed	-	-	RAKBANK	Alice Rahman

Sale Staff column ON by default for every user (Customize Table). Sale staff see their own cases, Sale managers their subtree, every other department sees all rows. Untagged applications show "-" and are visible to non-Sale users only.

Screen	Sales staff	Sales manager	Other departments
Application Enquiry (ACP-226/227)	Own tagged cases	Own + subtree, unlimited depth	All rows, untagged included
Report Enquiry + exports (ACP-230, 265/266/268)	Own tagged cases	Own + subtree	All rows, unfiltered
Sale Staff column and detail field	ON by default	ON by default	ON by default; "-" for untagged

1 Pre-filter first

The visibility rule runs before channel, product, status and search filters. Default filters are identical for everyone.

2 Sale Staff column

ON by default for every user through Customize Table; the code itself is available as a column too.

3 Manager sees the subtree

Jane Smith sees her own cases and Alice Rahman's: 3 of 7 rows. Unlimited depth, real time.

4 Untagged shows "-"

Visible to non-Sale users only. Report Enquiry and exports follow the same scope.

1	Assigned to Alice Rahman via UTM	Sale Agent Code STF-042 - source UTM - at submission	System
2	Finalize Income by ECB	Finalized Income is success	System

Checker Queue > Request #RQ-1042

Module: User Management > Type: Update > Status: Pending Review > Updated by: Maker name

Field	Old Value	New Value
First Name	Alice	Alice
Department	Sale	Sale
Sale Agent Code	—	STF-042 (first-time assignment)
Reporting Manager	Jane Smith	Jane Smith, John Doe

Reject

Approve → re-validates IEM001 / IEM002

First audit-trail entry, written at submission: "Assigned to [Staff Name] via [UTM / Pop-up / Round-robin / Backfill]" with the Sale Agent Code and the time.

Raw value received

Exactly as typed in the pop-up or carried in the link.

Resolved Sale Agent Code

Matched on the canonical key against active Sale users.

Source and timestamp

UTM, Pop-up, Round-robin or Backfill, and when it was captured.

1 Sale Staff on the case

Full name and code on Application Details; the first audit-trail entry records who was assigned, how, and when.

2 Source you can trust

UTM, Pop-up, Round-robin or Backfill is stored next to the raw value received.

3 Old / new comparison

Checker Detail shows the code and the manager list before and after, first-time assignments included.

4 Approve re-validates

IEM001 and IEM002 run again at approval, so two concurrent requests cannot land a duplicate or a cycle.

Customer Pop-up & Guardrails

Referral code (optional)

Enter the code given by your sales representative, or continue without one.

Sale Agent Code

STF-042 ✓ Code applied

Unknown code: "Code not recognised – check with your salesperson or continue without".

Continue without

Apply code

Cannot move Jane Smith out of Sale

IEM003 – This user is the Reporting Manager for 2 active user(s). Reassign their reports before changing the department.

Deactivating a Sale user with tagged cases is allowed: the cases keep their tag and stay visible to the Reporting Manager(s) and to non-Sale users.

Subject: [Bank Portal] Unmatched Sale Agent Code for RAK_APPRO_202600000209

To: Queue / Ops admin

Dear Admin, the sale_agent_code "stf-0042" received on 07/09/2026 10:41:12 does not match any active Sale Agent Code. The application goes to sales round-robin where a pool is configured; otherwise it stays untagged and visible to non-Sale users. Please investigate. The same ET51 pattern fires when the round-robin pool is empty for the channel / product.

1 Referral Code pop-up

The customer enters the code the salesperson gave them. Validated live; an unknown code can be skipped. The latest matching code wins at submission.

2 Lifecycle guardrails

A manager cannot leave Sale or be deactivated while active Sale users report to them (IEM003). Deactivating staff is allowed; their cases keep the tag.

3 Ops alert on unmatched codes

A typo or a leaver's code never fails silently: ops receive the code, the application reference and the timestamp (ET51 pattern).

Every edge is audited: pop-up captures carry source and timestamp, lifecycle changes go through Maker/Checker, and alerts name the code, the application reference and the time received.

3 • Why It Sells

Six things a bank gets on day one

Best Selling Points • what a bank gets

Six things a bank gets on day one. Every proof line below comes straight from the approved acceptance criteria of AMP-2548.

1 One code, end to end

The bank's own Sale Agent Code on the user record, in the UTM link, in the customer pop-up and on the application. No mapping tables, no second identifier.

2 Switch it on by department

Department = Sale drives the fields, the filters and the round-robin pool. No new permission, no role rework, no migration grant.

3 Hierarchy without limits

Unlimited depth, several managers per user, real time when the org chart changes. A regional head sees every level below.

4 Attribution you can audit

Every capture is logged with its source and timestamp; the tag is immutable once submitted, so sales credit never moves silently.

5 Operations never lose sight

Every other department keeps full visibility, untagged cases included, and a typo'd link raises an alert instead of a lost lead.

6 Bank-grade control

Maker/Checker on every change, uniqueness and cycle checks re-run at approval, scope evaluated server-side on every request.

Go-Live Readiness • data, dependencies, next steps

Day-one data

Existing Sale users

Get their Sale Agent Code through Edit User (Maker/Checker) at go-live; until then they see no applications (IM005).

Historical applications

One-off backfill: cases whose stored referral code matches an active Sale Agent Code are tagged (source = Backfill, audited). No round-robin backfill.

Everything else

Stays visible to non-Sale users exactly as today. Reports, exports and queues are untouched.

Dependencies to close

Distribution Portal parameter

sale_agent_code added to the Super Admin-configurable UTM parameter list: one name, case-sensitive, across every channel and product.

Notification audit

Review every template that mails the assigned staff member and decide where the Reporting Manager is copied (separate ticket).

Mockup and messages

Mockup labels move to "Sale Agent Code"; IEM001 to IEM003 and IEM005 confirmed unused in the message registry.
