The journey decides the salary flow, not the customer

1 Is the salary already credited at the bank?

Read from the bank's ETL salary credits for an existing customer.

YES → **STL Salary transfer**

Journey: "Salary account verified" replaces the transfer question; treated as STL.
Bank: account validated, salary-transfer pricing, disbursed.

NO ↓

2 Will the customer move the salary?

The "Transfer my salary to Reem Bank" toggle.

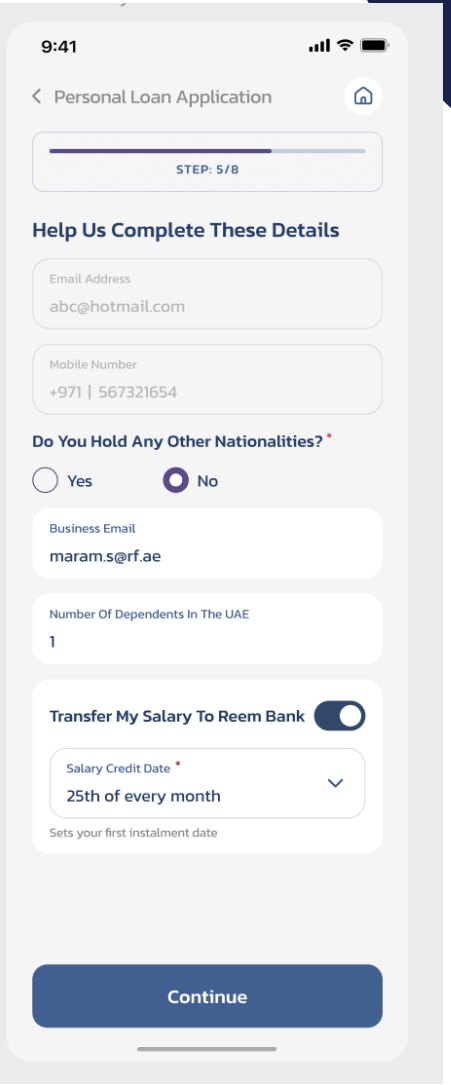

YES → **FSTL Future salary transfer**

Journey: customer opts in and signs the salary-transfer letter in the journey.
Bank: held with flags until the salary lands, then disbursed.

NO → **NSTL No salary transfer**

Journey: salary stays at the current bank; no transfer letter.
Bank: priced and processed as a non-salary-transfer product.

The salary flag travels with every application to the bank's Ops and Fulfillment queues.

Question 2 in the journey. Toggle ON sets FSTL.

Business Context & Client Cases

Salary-transfer pricing needs the salary at Reem Bank. Today the journey knows only NSTL — detected salaries, future transfers and clients without an account all fall out. The backend now classifies every applicant before the screen renders and asks only what it cannot derive.

C1 — New to bank

Toggle ON → FSTL · asks the 1st salary credit date.

Fulfilment: CIF + account + IBAN created, then the loan or card.

C2 — Salary already credits to Reem (detected)

Toggle stays visible, relabelled · asks nothing — date, account and IBAN are already with the bank.

Releases at creation — no letter, no hold.

C3 — Has an account, salary elsewhere

Toggle ON → FSTL · asks the 1st salary credit date.

Existing account reused — the letter carries its IBAN.

C4 — Reem client without an account

Toggle ON → FSTL · asks the 1st salary credit date.

Account created along the way at fulfilment — previously a dead end.

Design anchor

A parallel application invalidates the one in progress — so the customer is never sent out of the journey to open an account first. NSTL (toggle OFF) keeps today's flow untouched: salaried IBAN, direct debit, immediate disbursal.

Asked on the journey: expected 1st salary credit date (FSTL only) · salaried IBAN + disbursement account (NSTL only) · everything else is detected or derived.

Workflow & Backend Updates

Personal Loan — workflow v2.0

Salary-type fork after acceptance → FSTL chain 15.1–15.7:

CIF → account + IBAN (one call) → loan booked with funds held → letter → Ops validate → salary watcher → release. NSTL/DDA chain unchanged.

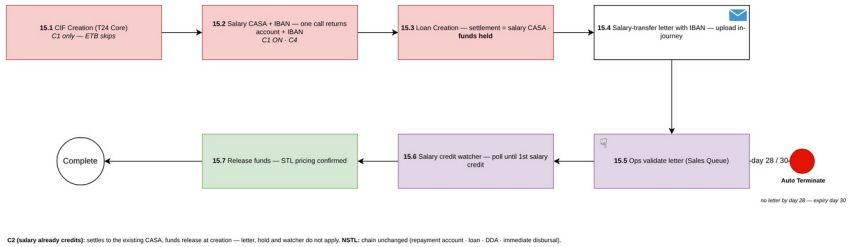

Credit Card — workflow v1.7

Fork after Account Creation (NI) → chain 17.1–17.6:

account + IBAN → card created INACTIVE → letter → validate → watcher → activate with STL pricing & limit.

New portal statuses — letter reminders D7 · 10 · 13 · 26, cut-off D28, offer expiry D30

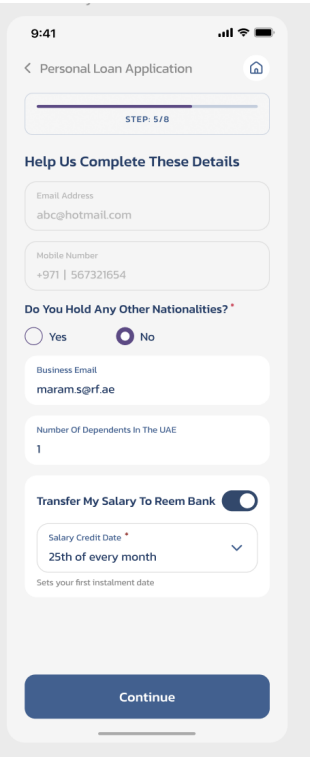

C2 (salary already credits): settles to the existing CASA, funds release at creation — letter, hold and watcher do not apply. **NSTL:** chain unchanged (repayment account · loan · DDA · immediate disbursal).

BACKEND LOGIC — THE FIVE RULES

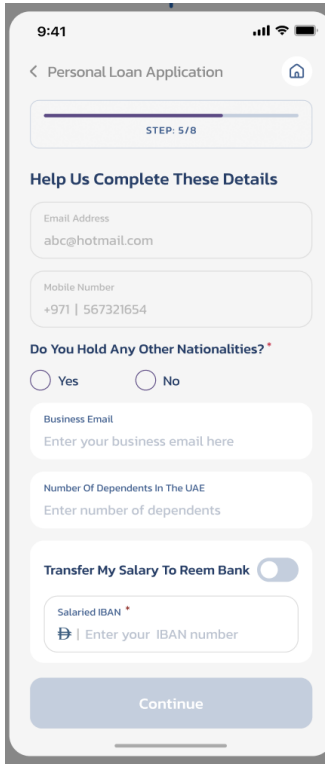

1. **Detect before render** — T/T-1 salary credit on own account · bureau IBAN match · products list for has-account
2. **Account + IBAN first** — one core call returns both — before the loan or card is booked
3. **Hold & release** — letter validated AND first salary credit detected — never one alone
4. **Repayment** — standing instruction from the Reem account · DDA stays NSTL-only
5. **Nothing asked twice** — no IBAN on FSTL/STL · grace derived, tuned once on the offer

Customer Journey & Open Questions

The live details screen (step 5/8)

Toggle ON — salary credit date sets the 1st instalment

Toggle OFF — salaried IBAN for the direct debit (as today)

Super Portal

Application Details adds Salary Type · Case C1–C4 · Grace Days · 1st Instalment · Letter status; letter validated in Sales/Ops, release by Maker–Checker.

OPEN QUESTIONS FOR REEM BANK

Appro proposal sits in BRD §10 — confirming it is enough to proceed

1. Funds hold / release mechanism at booking — CORE
2. Debit card for the account created along the way — CARDS
3. Standing instruction for STL repayment — CORE
4. Confirm: no security cheque, any variant — CREDIT POLICY
5. Arabic copy: toggle, letter, five client emails — BUSINESS
6. Letter validation SLA in the 28-day window — OPERATIONS
7. C2 with toggle OFF — repayment account — BUSINESS
