N1 - Very High Risk

ECB Consumer Credit Score 3.0

What's new in Super Portal

Q3 2026

Prepared for Reem Bank • V1.0 • 25 September 2026
Appro Onboarding Solutions FZ-LLC • Credit Bureau & Decisioning

Score 3.0 arrives with **three new tools** for your credit team.

The bureau's new score splits customers into two populations — **Mature** and **New to Credit** — each with its own scale and its own range codes. Super Portal now speaks that language, so your credit policy can too.

20 new Score 3.0 range codes	1 new Rule Engine variable	2 new Score Check attributes	0 changes to your published strategies
--	--------------------------------------	--	--

WHAT'S NEW IN SUPER PORTAL

01

Score 3.0 codes in every rule

Select M0–M9 and N0–N9 on any AECB Score Range criterion, right beside the codes you use today.

02

Two populations, told apart

A new AECB Score Segment variable lets one strategy treat Mature and New-to-Credit customers differently.

03

Score Range in Score Checks

Build Score Check Management value sets on the Score 3.0 codes — not just the raw number.

AND NOTHING YOU RUN TODAY CHANGES

Same bureau interface

Request format and connectivity are unchanged.

Strategies keep running

Nothing published is retired or remapped.

Score checks untouched

The numeric AECB Score condition works as before.

01 Every Score 3.0 code, ready to select

Credit users pick the new codes straight from the **AECB Score Range** criterion — the same list and the same workflow, with twenty new options.

The screenshot shows a user interface for selecting AECB Score Range codes. A dropdown menu is open, displaying the following options: M6 – Low Risk, M7 – Low Risk, M8 – Very Low Risk, M9 – Very Low Risk (highlighted), N0 – Very High Risk, N1 – Very High Risk, and N2 – High Risk. The background interface includes a form with a 'Length of service (months)' field, a 'Hailey' field, and an 'AECB Score Range' field with a search bar containing 'Select valueQ'. A 'Match All Conditions' button is also visible.

Strategy criterion · AECB Score Range · Score 3.0 codes in the value list

- ✓ Labelled the way credit officers already read them — **M0 – Very High Risk** through **M9 – Very Low Risk**.
- ✓ Added **alongside** today's codes. Nothing you have published is retired or remapped.
- ✓ The operators your team already uses: **Is In, Is Not In, Include, Does Not Include, Is Empty, Is Not Empty**.

02 One new variable. Two populations, told apart.

AECB Score Segment tells a strategy which scorecard produced the score — Mature or New to Credit — so a single rule can treat each one correctly.

The screenshot shows the Appro rule builder interface. A criterion row is highlighted with a red box and labeled '1'. It contains the variable 'AECB Score Segment' followed by 'Is in' and a search input 'Select valueQ'. A dropdown menu is open, showing two options: 'Mature' and 'New to Credit', which are highlighted with a red box and labeled '2'. To the right, there is a radio button labeled 'Match All Conditions'. Below the criterion row is a button labeled '+ Add criteria'.

- 1 New variable on the criterion row 2 Two values: Mature / New to Credit

WHY IT MATTERS

ONE SCORE, TWO OPPOSITE DECISIONS

600

MATURE CREDIT

High Risk

Tranche M2 · band 524–673

SAME
SCORE

600

NEW-TO-CREDIT

Low Risk

Tranche N9 · band 554–650

If a single policy table is keyed on the numeric score alone, these two customers are treated identically. They are not the same risk. Every score-dependent rule in your stack must read **Segment** alongside **Score** — or key off the Risk Tranche, which is already segment-safe.

- ✓ Available in **Segmentation, Filtration and Deviation**.
- ✓ Also available as an attribute in **Score Check Management**.

GOOD TO KNOW New to Credit has no Very Low Risk band — its scale tops out at 650. A rule that selects Very Low Risk, or tests a score above 650, will never match a New-to-Credit customer. Pair it with AECB Score Segment.

03 Score Range, right where your score checks live

Score Check Management already tests the numeric AECB Score. It now tests the **Score 3.0 codes** too — the segment-safe way to set a threshold.

The screenshot shows the 'Score Check Management' interface. At the top, there's a breadcrumb trail: 'Master List > Score Check Management > Credit Card'. Below this, there are tabs for 'Credit Card', 'Personal Loan', 'Casa', 'Mortgage Loan', and 'Auto Loan'. The 'Credit Card' tab is active. On the left, there's a search bar and a list of groups: 'Group 3. UAEN', 'Group 2. UAEN', and 'Group 1. Expats'. The 'Group 1. Expats' group is selected. The main area shows 'Group Info' for 'Group 1. Expats' with a nationality of 'Is Not In - United Arab Emirates'. To the right, there's a 'Values' section with a table showing '100' and 'AECB Score Greater Than Or Equal To 300'. Below this, there's a row for 'AECB Score Range' with values 'Is in M6 - Low Risk, M7 - Low Risk, M8 - Very Low Risk, M9 - Very Low Risk'.

Score Check Management · Credit Card · Group 1. Expats

THE SAME VALUE SET, BEFORE AND AFTER

The comparison shows two states of the value set. The top state, labeled 'TODAY', shows a value of '100' and 'AECB Score Greater Than Or Equal To 300'. The bottom state, labeled 'WITH SCORE 3.0', shows the same value of '100' and 'AECB Score Greater Than Or Equal To 300', but with an additional row for 'AECB Score Range' with values 'Is in M6 - Low Risk, M7 - Low Risk, M8 - Very Low Risk, M9 - Very Low Risk'.

- ✓ Two new attributes — **AECB Score Range** and **AECB Score Segment** — beside the numeric AECB Score.
- ✓ Values read exactly as they do in the Rule Engine — **M6 - Low Risk** through **M9 - Very Low Risk**.
- ✓ Works under **Match All / Match Any**, like every other attribute.
- ✓ Added once through **Edit Attributes**, then available to every group on the tab.
- ✓ Live on **Credit Card, Personal Loan and CASA**.

APPENDIX A

How Consumer Credit Score 3.0 works

The goal is unchanged — rank customers by the likelihood of reaching 90+ days past due on at least one contract within 12 months. What changes is how the score is built: **one scored population becomes two**, each with its own scorecards, scale and range codes. On both scales, a higher score means lower risk.

POPULATION A

Mature Credit • 300 – 850

- Oldest credit contract is older than 3 months
- 7 segment scorecards
- Range codes **M0 – M9** across five risk groups, Very High to Very Low
- A score of **700** means 20 : 1 odds — a 4.8% expected bad rate. The odds double every 40 points.

POPULATION B

New to Credit • 300 – 650

- No valid credit history, or a first contract opened in the last 3 months, with telco or account data in the last 12 months
- 3 segment scorecards built on telco, cheque, income and account data
- Range codes **N0 – N9** across four risk groups — **no Very Low Risk band**
- A score of **475** means 7 : 1 odds — a 12.0% expected bad rate. The odds double every 25 points.

HOW IT ARRIVES IN THE BUREAU RESPONSE

INDEX

715

The three-digit score — 300 to 850 on Mature, 300 to 650 on New to Credit.

RANGE

M2 • N9

A two-character code naming the scorecard and the band. This is the value to set rules on.

NO-HIT & THIN FILE

Now scored

Alternative Score and No-Hit Score are retired — these applicants now arrive with a real Score 3.0 value.

THE TWO SCALES SIDE BY SIDE

APPENDIX B The 20 Score 3.0 range codes

Each code carries a risk group and a descriptive band. In Super Portal a value reads as code and risk group — for example **M9 – Very Low Risk**. Both scales are contiguous: every score maps to exactly one code.

Mature Credit 300 – 850				New to Credit 300 – 650			
CODE	RISK GROUP	BAND	SCORE	CODE	RISK GROUP	BAND	SCORE
M0	Very High Risk	Weak	300 – 300	N0	Very High Risk	Weak	300 – 427
M1	Very High Risk	Weak	301 – 523	N1	Very High Risk	Weak	428 – 450
M2	High Risk	Fair	524 – 673	N2	High Risk	Fair	451 – 463
M3	Medium Risk	Good	674 – 714	N3	High Risk	Fair	464 – 478
M4	Medium Risk	Good	715 – 740	N4	High Risk	Fair	479 – 491
M5	Medium Risk	Good	741 – 755	N5	Medium Risk	Good	492 – 506
M6	Low Risk	Very Good	756 – 773	N6	Medium Risk	Good	507 – 519
M7	Low Risk	Very Good	774 – 789	N7	Low Risk	Very Good	520 – 531
M8	Very Low Risk	Excellent	790 – 809	N8	Low Risk	Very Good	532 – 553
M9	Very Low Risk	Excellent	810 – 850	N9	Low Risk	Very Good	554 – 650
