PROPOSAL · INTERIM SOLUTION

Check Manual CIF

A controlled digital-journey path for customers whose CIF was created manually in T24 by Operations

Prepared for Reem Bank — Executive Review

Appro Onboarding Solutions FZ-LLC · 15 October 2026

EXECUTIVE SUMMARY

One check, placed early, closes the gap

WHERE WE ARE

A customer base the journey cannot see

Reem Bank holds a list of CIFs created manually in T24 by Operations — customers with an existing banking relationship who have not availed any product through the digital journey.

THE GAP

The journey assumes net-new customers

There is no controlled path for these customers today: the journey runs its full check chain and, at fulfilment, creates a new CIF in T24 — for a customer who already has one.

THE PROPOSAL

Check Manual CIF — interim solution

A backend-configured list of manually-onboarded CIFs, checked at the start of the Pre-Dedupe step right after EID scanning. A match ends the journey gracefully — screen, Email/SMS, dedicated status, full audit visibility — and hands the customer to Operations.

3w **Tentative delivery: 2 weeks development + 1 week Reem Bank SIT,** then deployment to RB UAT for Expleo testing — delivered within the dedicated Appro squad, no separate change request. BRD sign-off starts the clock.

CONTEXT

Two ways a customer exists in T24 today

1 Digitally onboarded

CIF created by the journey
The digital journey runs the full verification and decisioning chain and creates the CIF in T24 at fulfilment.

Fully visible to the Bank
Application, status, failed reasons and every step are available in Super Portal Enquiry and the Audit Trail.

2 Manually onboarded by Operations

CIF created directly in T24
An existing banking relationship, created by the Operations team — with no product availed through the digital journey.

Invisible to the journey today
The digital journey has no awareness of these CIFs — nothing recognises the relationship when such a customer starts an application.

→ Appro proposes an **interim, configuration-led solution** to handle this segment now. Maintaining the list on the Super Portal front end is a different customization with a longer timeline — available as a follow-on phase.

Confidential document between Appro Onboarding Solutions FZ-LLC and Reem Bank — not to be shared outside both organizations.

PROPOSED SOLUTION

Check Manual CIF — one check, three layers

1 Backend configuration

The Manual CIF list

The list of CIFs manually onboarded in T24 is configured in the backend — the so-called **Check Manual CIF**.

Part of the Pre-Dedupe step

The logic check is added into the Pre-Dedupe step, triggered after EID scanning — the earliest point at which the customer is identified.

2 Customer journey

Termination screen

The customer sees a termination screen — text and design prepared by Appro and shared for the Bank team's review.

Email / SMS

The customer is reassured in writing: the Bank already holds the relationship and the team will contact them to complete the account opening.

3 Back office & portal

Configurable communications

Email/SMS content is configured in Super Portal, so the text can be updated by the Bank.

New application status

A dedicated status for this group — to be defined in the BRD (e.g. within the Lead or Rejected family).

Enquiry & Audit Trail

Failed reasons and related data points are shown in Enquiry and the Audit Trail of the Super Portal.

Confidential document between Appro Onboarding Solutions FZ-LLC and Reem Bank — not to be shared outside both organizations.

Triggered at the earliest possible point

Why this point: on a match, EFR 1.2 / EFR 1.12, the remaining Pre-Dedupe checks and every other integration are no longer called — no spend on a journey that will not proceed.

Customer scans EID — front & back

Journey steps 6–7. The scan identifies the customer — no integration call needed for the check itself.

★ Check Manual CIF

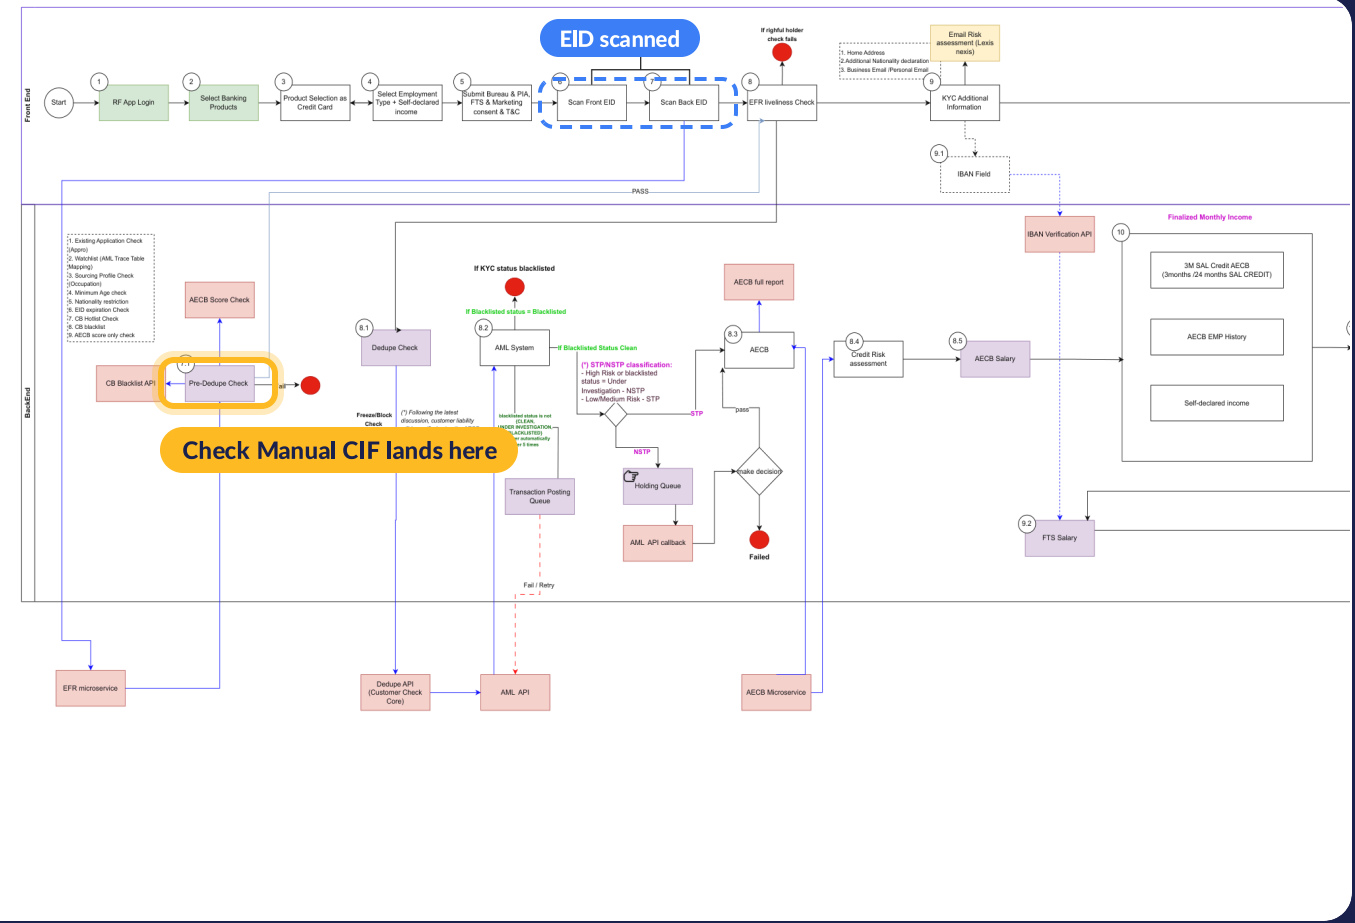

New first gate of the Pre-Dedupe step: the scanned identity is checked against the configured Manual CIF list.

Not on the list

The journey continues exactly as today — EFR verification, remaining Pre-Dedupe checks, Dedupe, AML, bureau and decisioning.

On the list

The journey ends gracefully — termination screen, Email/SMS, dedicated status with audit entry, Operations follow-up.

Credit Card digital journey blueprint (final, 25/09) — trigger point highlighted at the Pre-Dedupe step.

CUSTOMER EXPERIENCE

A graceful stop, not a dead end

IN THE APP

Termination screen

The customer is informed on screen that the Bank already holds their relationship and the journey cannot continue digitally for now.

Screen text and design will be prepared by Appro and shared for the Bank team's review

EMAIL / SMS

The message the customer receives

> *"You already have a banking relationship with us. Our team will contact you shortly to help complete your account opening. Thank you for banking with us."*

Content is configured in Super Portal, so the Bank can update the wording.

DELIVERY PLAN

Three weeks from BRD sign-off

GATE

BRD prepared & signed off

Appro prepares the BRD; Reem Bank reviews and signs off. Development starts on sign-off.

→

2 WEEKS

Development

Check Manual CIF configuration, journey behaviour, communications, status and audit visibility.

→

1 WEEK

Reem Bank SIT

System integration testing by Reem Bank.

→

DEPLOY

RB UAT — Expleo testing

Deployed to the Reem Bank UAT environment for Expleo testing.

✓ Delivered **within the dedicated Appro squad — no separate change request.** The timeline is tentative and starts at BRD sign-off.

What we need from Reem Bank

1. **BRD review and sign-off**
   The BRD is prepared and signed off before development — sign-off starts the two-week development clock.

2. **The Manual CIF list**
   The list of manually-created CIFs from Operations, for the backend configuration.

3. **Review of screen and message content**
   Termination-screen text and design, and the Email/SMS wording — shared by Appro for the Bank team's review.

+ Beyond the interim

Portal-maintained list
If Reem Bank prefers to maintain the Manual CIF list on the Super Portal front end, that is a different customization requiring a longer timeline — it can be scoped as a follow-on phase once the interim solution is live.

Status naming
The dedicated application status for this segment is an open design decision, finalised together in the BRD (e.g. within the Lead or Rejected family).
